(54) IMAGE DISPLAY DEVICE AND IMAGE DISPLAY METHOD AND COMPUTER READABLE RECORDING MEDIUM RECORDED WITH IMAGE DISPLAY CONTROL PROGRAM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an image display device capable of discriminating the mode and the extent of a conversion processing instantly only by locking at an image.

SOLUTION: Colors of a frame are respectively specified with 256 gradations of red, green and blue (R, G, B) and this frame is displayed around a displayed image. Then, this frame is constituted so that when the magnifying power of the image is 0%, the value of blue and values of red and green are respectively made to be 255 and 0% and the color of blue is reduced by 250/100 every time the magnification power is raised by 1%. When the frame is constituted like this, when the magnification power is 100%, values of red, green and blue become all 0 and the color of the frame becomes black. Moreover, when the magnification power is made to be equal to or larger than 100%, the value of red is made to be increased by 255/100. Thus, when the magnification value is 200%, the value of red becomes 255 and when the magnification power is made to be equal to or larger than 200%, values of colors of the frame are made so as not to be changed.
